

Projected changes Central Coast

NSW

Low-emissions scenario

Average temperature increase

↑ **1.0°C**
2050

↑ **1.2°C**
2090

Hot days per year will increase by:

4.3 **5.0**
2050 2090

Sea level will rise by:

19cm **39cm**
2050 2090

Severe fire weather days per year will increase by:

0.7 **0.5**
2050 2090

High-emissions scenario

Average temperature increase

↑ **1.7°C**
2050

↑ **3.3°C**
2090

Hot days per year will increase by:

6.3 **13.6**
2050 2090

Sea level will rise by:

23cm **59cm**
2050 2090

Severe fire weather days per year will increase by:

0.9 **1.6**
2050 2090

Regional impacts

Bushland

Increased severe fire weather

Estuarine settlements

Inundated by rising sea levels

Inundated by rising sea levels

Coastal settlements

Increased extreme heat

Urban areas

Data is based on NARCIIM2.0 (2024) projections for SSP1-2.6 (low-emissions) and SSP3-7.0 (high-emissions) and is presented relative to the historical climate baseline of 1990–2009. The projections for 2050 represent averaged data for 2040–2059 and projections for 2090 represent averaged data for 2080–2099. Values presented are averages across the NARCIIM2.0 model ensemble, and do not represent the full range of plausible climate futures. Regional climate change impacts are used to highlight how the region is likely to be affected by climate change, and impacts are not limited to the examples provided. Sea level rise data is from the IPCC's Sixth Assessment Report and is presented relative to a baseline of 1995–2014.
